

A REVOLUTION IN SWIMMING POOLS AND SPAS

NEW

**100 % eco-friendly,
automated, remote
Water management system**

The digital revolution has reached the world of swimming pools with **Oxymatic® Smart**, a new, totally eco-friendly water management system. Hydrover has developed a new way of controlling pools so that you can remotely verify and operate a host of different functions and parameters from anywhere you like.

**HYDROLYSIS:
A TECHNOLOGY THAT
MAINTAINS AN
IMPECCABLE
POOL WATER
WITH MINIMAL
ADDITIVES.**

Green technology

Thanks to our patented ABOT Hydrolysis & Ionization technology, users can enjoy perfectly clear, pure and healthy water with the lowest legal amount of free chlorine.

Total water control

This innovative type of automatic integral control optimises all pool functions (pH, circulation, disinfection, energy savings, heating, lighting, etc.) and makes it possible to view and operate all water parameters in real-time.

Internet connected system

This ecological system can be controlled from mobile apps available on Iphone, Android and PCs, making it possible to check the pool's condition at any time, and to manage its functions globally.

*So pure
you could drink it...*

BENEFITS

Fully integrated, total control

The Oxymatic® Smart system with its new 10-inch touch screen incorporates every function needed to take charge of the management of your pool.

Reduction of chemicals and water replacement

Oxymatic® Smart can manage and control pool parameters such as pH and ORP very efficiently. This avoids sudden variations and reduces consumption of chemicals. Comparative studies carried out at public pools showed reductions of chemical usage by up to 80%. It also helped minimize water replacement.

Oxymatic Chamber*

*6 inputs for probes or dosing pumps such as: pH probe, ORP probe, Temperature probe, Copper sensor, pH dosing, Peroxide or Liquid Chlorine dosing, Liquid Algaecide dosing, etc.

Improved performance for pool professionals

The pool professional provides an ecological water management system that takes care of their customers' pools in real-time and with no need to travel. The system's ability to monitor multiple sensors including chemical levels enables them to proactively arrange maintenance visits, displays customer data, and helps anticipate potential problems. These features allow pool professionals and maintenance companies to save time and money since unnecessary and unscheduled visits are eliminated and replaced by proactive maintenance. This increases peace of mind by anticipating and preventing problems before the customer has any issues with their water.

Public pools

The Oxymatic® Smart system's advanced control board has built in inputs for an optional Oxidation Reduction Potential (ORP/Redox) Sensor, or Free Chlorine sensor. With either of these sensors installed, it is able to precisely administer chlorine/bromine automatically to user defined ORP or Free Chlorine settings. This precise automatic dosing helps reduce maintenance labor at public facilities such as urban developments, hotels, spas, sports facilities, etc.

2 YEAR LIMITED WARRANTY

BY NIRVANA HEAT PUMP, THE EXCLUSIVE IMPORTER OF THE OXYMATIC WATER MANAGEMENT SYSTEM IN CANADA.
